## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2, drawn to a polypeptide of SEQ ID NO:1, classified in class 530, subclass 350, for example.
- II. Claims 3-4, drawn to a gene of SEQ ID NO:2, classified in class 536, subclass 23.6, for example.
- III. Claims 5-6, drawn to a gene of SEQ ID NO:3, classified in class 536, subclass 23.6, for example.
- IV. Claims 7 and 10, drawn to a method to render resistance to an environmental stress to a plant, classified in class 435, subclass 468, for example.
- V. Claims 8, 9, 13 and 14, drawn to a transgenic plant exhibiting resistance to an environmental stress, classified in class 800, subclass 298, for example.
- VI. Claims 11-12, drawn to a method to render resistance to an environmental stress to a plant, classified in class 800, subclass 289, for example.
- VII. Claims 15-18, drawn to a transgenic plant exhibiting resistance to an environmental stress, classified in class 800, subclass 298, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III, V and VII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the polypeptide of Group I is structurally and functionally distinct from the polynucleotides of Inventions II-III and the transgenic plants of Inventions V and VII, and thus has a different mode

Art Unit: 1638

of operation and a different function. Inventions II-III represent structurally distinct polynucleotides. Where structural identity is required, such as for hybridization or expression, the different sequences have different effects. The transgenic plants of Inventions V and VII are also distinct from each other because they comprise structurally distinct polynucleotides. The transgenic plants of Inventions V and VII are distinct from the polynucleotides of Inventions II-III because the transgenic plants must express the incorporated gene at levels sufficient to exhibit resistance to an environmental stress and thus have different effects.

Inventions II and VI are related as product and process of use. Inventions III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another materially different product. For example, a method to render resistance to an environmental stress to a plant can be practiced by cross-hybridization with a resistant parent.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the requirement for different areas of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
